*Environmental Health Perspectives* (*EHP*) is published with support from the U.S. National Institute of Environmental Health Sciences (NIEHS) as a fully independent peer-reviewed scientific journal.

*EHP* serves as a forum for the discussion of the interrelationships between the environment and human health by publishing high-quality research and news of the field. *EHP* supports global environmental health research through its policy of full open access and commitment to dissemination of research and information to the developing world.

## *EHP* Research

*EHP* publishes original research, reviews, and commentaries from a wide range of scientific disciplines encompassing basic research, human studies, and *in vitro* and *in vivo* research with a clear relationship between environmental exposures and human health effects.

Highly represented research areas include epidemiology, toxicology, exposure science, risk assessment, public health, and climate change. In addition, each issue includes a section devoted to children's health research, and each year the October issue focuses on children's health. *EHP* also addresses ethical, legal, social, and policy issues.

Studies dealing with ecological issues or effects on wildlife populations are welcome when the relevance of their findings to human health is evident. *EHP* also publishes occasional collections, abstracts, and special reports, including an annual Children's Health Collection (<http://ehp.niehs.nih.gov/special-collections>).

## SUBMISSION AND REVIEW

*EHP* is published entirely online. There are no fees for submitting to or publishing in *EHP*. Complete information on how to submit a manuscript is available in *EHP*'s Instructions to Authors at <http://ehp.niehs.nih.gov/instructions-to-authors>.

Submissions undergo initial review by editors and consultants to assess the paper's relevance to environmental health science and human health specifically, its originality and potential to contribute new or important information to the field, the use of appropriate methods, interpretation and conclusions consistent with the data presented, and clarity of presentation. About one-third of all papers submitted to *EHP* are selected for peer review.

*EHP*'s overall acceptance rate is approximately 13%. Papers published in *EHP* usually complete 1–3 rounds of peer review before they are accepted.

All manuscripts undergo an in-house editorial review for scientific content and accuracy as well as compliance with *EHP* formatting and competing financial interests requirements before they are accepted for publication.

Accepted papers are published as Advance Publications within 2–3 weeks unless authors request otherwise. Advance Publication articles are cited in PubMed within 2–3 days of publication.

#### COMPETING FINANCIAL INTERESTS

*EHP* has a policy of full disclosure of all actual or potential competing financial interests involving people or organizations that might reasonably be perceived as relevant.

#### PRESS RELEASES

The *EHP* News Editor coordinates with authors who wish to do media outreach through their institutions. *EHP* does not issue press releases.

#### *EHP* News

News Editor: Susan M. Booker  
[susan.booker@nih.gov](mailto:susan.booker@nih.gov)

There's more to *EHP* than groundbreaking research. *EHP* News feature stories explain environmental health issues for a diverse audience, including researchers, policymakers, advocacy groups, and nonscientists. Science Selection summaries translate findings from *EHP* research content in clear terms.

#### *EHP* International Program

Manager: Hui Hu  
[hui.hu@nih.gov](mailto:hui.hu@nih.gov)

*EHP*, through its International Program (<http://ehp.niehs.nih.gov/international>), seeks to expand the quality of and access to scientific information around the world. We achieve this through our quarterly Chinese Edition of translated news and other selected *EHP* content, and through our international journal partnerships.
